Bordeaux, Aquitaine, FR

SKILLS

Cloud & Infrastructure, Development & Automation, Systems & Databases

EDUCATION

in DevOps Consultant | ib - groupe Cegos
, 2021 - 2021

in Network and System Administration | EPSI
, 2020 - 2020

Master (1st year) in Materials Chemistry | Université de Bordeaux
, 2018 - 2019

Bachelor in Chemistry | Université de Bordeaux
, 2015 - 2018

CERTIFICATIONS

GCP Architect ($certification.Date)
CKA Kubernetes Administrator ($certification.Date)
Gitlab Associate ($certification.Date)

LANGUAGES

French (Native)
English (Professional)

HOBBIES

Coding , Gym , Concerts , Travels

EXPERIENCES

Senior Tech Lead - Platform Team | StackHPC
| Since Apr, 2026
Senior Tech Lead on the Platform team, developing features for an internal development platform serving HPC and research workloads on Kubernetes and OpenStack.

- Design and build platform features enabling researchers to self-service HPC and compute workloads.
- Deliver Kubernetes-as-a-Service using Cluster API (CAPO) to provision and manage workload clusters on OpenStack.
- Operate and evolve Kubernetes and OpenStack infrastructure underpinning the platform.

Site Reliability Engineer | Thales Cloud Sécurisé
| Jun, 2023 - Mar, 2026
SRE on the Compute & Virtualization team engineering the IaaS core of a SecNumCloud-compliant sovereign cloud (Thales-Google Cloud partnership).

- Built and operated highly available Kubernetes clusters as the sovereign cloud foundation.
- Delivered Kubernetes-as-a-Service with Cluster API (CAPK) to provision and manage workload clusters on KubeVirt.
- Delivered a VM-as-a-Service experience with KubeVirt and multi-homed networking via KubeOVN/Multus.
- Ran production infrastructure atop GCP and Google's internal backend (Borg), owning reliability for the sovereign cloud IaaS core.
- Held on-call responsibility for production services, driving incident response, root-cause analysis, and post-incident follow-up to meet SLOs.
- Collaborated directly with Google engineers on design reviews and knowledge transfer to align the platform with Google Cloud practices.
- Managed a declarative NixOS environment and built Golang operators with Kubebuilder to automate operations.

DevOps Consultant at Orange Business Service | SFEIR
| Nov, 2022 - Jun, 2023
Level 3 DevOps Consultant embedded at Orange Business Services as a senior technical authority for cloud-native architecture and DevOps best practices.

- Architected secure AWS infrastructure with Terraform (VPC, EKS, IAM) and operated mission-critical Kubernetes clusters.
- Centralized secrets with HashiCorp Vault across Terraform and Kubernetes workloads.
- Built a long-term observability stack with Prometheus, Thanos, and Grafana.

DevOps Administrator | SysOps | CHEOPS TECHNOLOGY
| Jun, 2021 - Oct, 2022
DevOps engineer in a squad building an internal, self-service Kubernetes-as-a-Service (KaaS) platform for development teams.

- Built the KaaS platform from scratch, automating server and cluster provisioning with Ansible.
- Implemented GitOps with ArgoCD and CI/CD pipelines with GitLab CI/CD.
- Secured the platform with HashiCorp Vault and Keycloak (OIDC IAM).

PROJECTS

Chihiro
A Go web app that watches Cluster API (CAPI) resources and offers a self-service dashboard to create, edit, and delete workload clusters via a config-driven templating engine, with OIDC auth and group-based RBAC.

RPCU

An open source, multi-tenant cloud platform built from scratch on baremetal, running OpenStack as Kubernetes operators (Yaook) on a reproducible NixOS foundation, with CAPI workload clusters and full GitOps via Flux.

Netwatch
A Kubernetes controller that grants temporary, time-boxed network access via a 'NetworkAccess' CRD, automatically creating and expiring NetworkPolicies to enforce least privilege.

MaxTac
A Kubernetes controller that abstracts verbose NetworkPolicies behind simple 'Access' and 'ExternalAccess' CRDs, letting developers define connectivity by application logic instead of low-level selectors.

Songbird
A CLI tool that lints and simulates Kubernetes network connectivity, evaluating NetworkPolicies to predict whether traffic is allowed or denied before changes reach a live cluster.

NixBook
A declarative, modular NixOS framework for laptops that defines the entire OS (packages, configs, dotfiles) as code with Nix Flakes for reproducible, shareable environments.

NixOS-Server
A server-focused NixOS configuration applying declarative and GitOps principles to bare-metal Kubernetes hosts, where every change is a git push enabling atomic updates and rollbacks.
