

# Victor Hang

## Senior Site Reliability Engineer

✉ [vhvictorhang@gmail.com](mailto:vhvictorhang@gmail.com) 📍 Bordeaux, Aquitaine, FR

### Experiences

**Senior Tech Lead - Platform Team** Since Apr, 2026  
**StackHPC**

Senior Tech Lead on the Platform team, developing features for an internal development platform serving HPC and research workloads on Kubernetes and OpenStack.

- Design and build platform features enabling researchers to self-service HPC and compute workloads.
- Deliver Kubernetes-as-a-Service using Cluster API (CAPO) to provision and manage workload clusters on OpenStack.
- Operate and evolve Kubernetes and OpenStack infrastructure underpinning the platform.

**Site Reliability Engineer** Jun, 2023 - Mar, 2026  
**S3NS**

SRE on the Compute & Virtualization team engineering the IaaS core of a SecNumCloud-compliant sovereign cloud (Thales-Google Cloud partnership).

- Built and operated highly available Kubernetes clusters as the sovereign cloud foundation.
- Delivered Kubernetes-as-a-Service with Cluster API (CAPK) to provision and manage workload clusters on KubeVirt.
- Delivered a VM-as-a-Service experience with KubeVirt and multi-homed networking via KubeOVN/Multus.
- Ran production infrastructure atop GCP and Google's internal backend (Borg), owning reliability for the sovereign cloud IaaS core.
- Held on-call responsibility for production services, driving incident response, root-cause analysis, and post-incident follow-up to meet SLOs.
- Collaborated directly with Google engineers on design reviews and knowledge transfer to align the platform with Google Cloud practices.
- Managed a declarative NixOS environment and built Golang operators with Kubebuilder to automate operations.

**DevOps Consultant at Orange Business Service** Nov, 2022 - Jun, 2023  
**SFEIR**

Level 3 DevOps Consultant embedded at Orange Business Services as a senior technical authority for cloud-native architecture and DevOps best practices.

- Architected secure AWS infrastructure with Terraform (VPC, EKS, IAM) and operated mission-critical Kubernetes clusters.
- Centralized secrets with HashiCorp Vault across Terraform and Kubernetes workloads.
- Built a long-term observability stack with Prometheus, Thanos, and Grafana.

**DevOps Administrator | SysOps** Jun, 2021 - Oct, 2022  
**CHEOPS TECHNOLOGY**

DevOps engineer in a squad building an internal, self-service Kubernetes-as-a-Service (KaaS) platform for development teams.

- Built the KaaS platform from scratch, automating server and cluster provisioning with Ansible.
- Implemented GitOps with ArgoCD and CI/CD pipelines with GitLab CI/CD.
- Secured the platform with HashiCorp Vault and Keycloak (OIDC IAM).

Github [Banh-Canh](#)  
Blog [Banh-Canh](#)

### Education

**DevOps Consultant**  
ib - groupe Cegos  
2021  
**Network and System Administration**  
EPSI  
2020

### Certifications

**GCP Architect**  
2023-09  
Google Cloud Skills Boost  
**CKA Kubernetes Administrator**  
2022-02  
Linux Foundation  
**Gitlab Associate**  
2021-04  
Gitlab

### Skills

**Cloud & Infrastructure**  
Kubernetes Kubevirt Cluster API  
Vault FluxCD/ArgoCD/Sveltos  
Openstack Kamaji Monitoring  
**Development & Automation**  
Golang Kubebuilder Python  
Git Docker Terraform Ansible  
Saltstack  
**Systems & Databases**  
NixOS Flatcar Debian RedHat  
Postgres MySQL  
**Languages**  
French Native  
English Professional

# Projects

---

## Chihiro

[github.com/RPCU/chihiro](https://github.com/RPCU/chihiro)

A Go web app that watches Cluster API (CAPI) resources and offers a self-service dashboard to create, edit, and delete workload clusters via a config-driven templating engine, with OIDC auth and group-based RBAC.

- Golang, OIDC auth, real-time UI over WebSockets
- Config-driven CAPI cluster templating engine
- Group-based RBAC & resource limits

## RPCU

[github.com/RPCU](https://github.com/RPCU)

An open source, multi-tenant cloud platform built from scratch on baremetal, running OpenStack as Kubernetes operators (Yaook) on a reproducible NixOS foundation, with CAPI workload clusters and full GitOps via Flux.

- OpenStack control plane as Kubernetes operators (Yaook)
- NixOS/Colmena nodes with Cluster API (CAPO) workload clusters
- Flux GitOps, Sveltos add-ons, Rook/Ceph & Cilium

## Netwatch

[github.com/Banh-Canh/netwatch](https://github.com/Banh-Canh/netwatch)

A Kubernetes controller that grants temporary, time-boxed network access via a 'NetworkAccess' CRD, automatically creating and expiring NetworkPolicies to enforce least privilege.

- Golang, Kubernetes controller (Kubebuilder)
- Dynamic, time-boxed NetworkPolicy automation via CRD

## MaxTac

[github.com/Banh-Canh/MaxTac](https://github.com/Banh-Canh/MaxTac)

A Kubernetes controller that abstracts verbose NetworkPolicies behind simple 'Access' and 'ExternalAccess' CRDs, letting developers define connectivity by application logic instead of low-level selectors.

- Golang, Kubernetes controller (Kubebuilder)
- Developer-friendly NetworkPolicy abstraction via CRDs

## Songbird

[github.com/Banh-Canh/songbird](https://github.com/Banh-Canh/songbird)

A CLI tool that lints and simulates Kubernetes network connectivity, evaluating NetworkPolicies to predict whether traffic is allowed or denied before changes reach a live cluster.

- Golang, Kubernetes API integration
- NetworkPolicy simulation & pre-deployment validation

## NixBook

[github.com/didactiklabs/nixbook](https://github.com/didactiklabs/nixbook)

A declarative, modular NixOS framework for laptops that defines the entire OS (packages, configs, dotfiles) as code with Nix Flakes for reproducible, shareable environments.

- NixOS & Nix Flakes, declarative OS configuration
- Modular profiles with Home-Manager

## NixOS-Server

[github.com/didactiklabs/nixOS-server](https://github.com/didactiklabs/nixOS-server)

A server-focused NixOS configuration applying declarative and GitOps principles to bare-metal Kubernetes hosts, where every change is a git push enabling atomic updates and rollbacks.

- NixOS & Nix Flakes, GitOps for bare-metal (FluxCD)
- Automated, reproducible Kubernetes host provisioning

# Hobbies

---

**Coding** golang, infrastructure, kubernetes, nix

**Gym** running, weightlifting, swimming

**Concerts** classical, j-pop, pop, jazz, funk, electro

**Travels** Japan, Italy, UK
