EDUCATION

DevOps (Development and Operations) Consultant | ib - groupe Cegos
, 2021

Network and System Administration | EPSI
, 2020

Master (1st year) Materials Chemistry | Université de Bordeaux
, 2019

Bachelor Chemistry | Université de Bordeaux
, 2018

CERTIFICATIONS

GCP Architect
CKA Kubernetes Administrator
Gitlab Associate

SKILLS

Cloud & Infrastructure, Development & Automation, Systems & Databases

LANGUAGES

French (Native)
English (Professional)

HOBBIES

Coding , Gym , Concerts , Travels

EXPERIENCES

Senior Tech Lead - Platform Team | StackHPC
| Since Apr, 2026

Senior Tech Lead on the Platform team, developing features for an internal development platform serving HPC and research workloads on Kubernetes and OpenStack.

Site Reliability Engineer | Thales Cloud Sécurisé
| Jun, 2023 - Mar, 2026

SRE on the Compute & Virtualization team engineering the IaaS core of a SecNumCloud-compliant sovereign cloud (Thales-Google Cloud partnership).

DevOps (Development and Operations) Consultant at Orange Business Service | SFEIR
| Nov, 2022 - Jun, 2023

Level 3 DevOps (Development and Operations) Consultant embedded at Orange Business Services as a senior technical authority for cloud-native architecture and DevOps (Development and Operations) best practices.

DevOps (Development and Operations) Administrator | SysOps (Systems Operations) | CHEOPS TECHNOLOGY
| Jun, 2021 - Oct, 2022

DevOps (Development and Operations) engineer in a squad building an internal, self-service Kubernetes-as-a-Service (KaaS) platform for development teams.

PROJECTS

Chihiro
A Go web app that watches Cluster API (CAPI) resources and offers a self-service dashboard to create, edit, and delete workload clusters via a config-driven templating engine, with OIDC auth and group-based RBAC.

RPCU
An open source, multi-tenant cloud platform built from scratch on baremetal, running OpenStack as Kubernetes operators (Yaook) on a reproducible NixOS foundation, with CAPI workload clusters and full GitOps via Flux.

Netwatch
A Kubernetes controller that grants temporary, time-boxed network access via a 'NetworkAccess' CRD, automatically creating and expiring NetworkPolicies to enforce least privilege.

MaxTac
A Kubernetes controller that abstracts verbose NetworkPolicies behind simple 'Access' and 'ExternalAccess' CRDs, letting developers define connectivity by application logic instead of low-level selectors.

Songbird
A CLI tool that lints and simulates Kubernetes network connectivity, evaluating NetworkPolicies to predict whether traffic is allowed or denied before changes reach a live

cluster.

NixBook

A declarative, modular NixOS framework for laptops that defines the entire OS (packages, configs, dotfiles) as code with Nix Flakes for reproducible, shareable environments.

NixOS-Server

A server-focused NixOS configuration applying declarative and GitOps principles to bare-metal Kubernetes hosts, where every change is a git push enabling atomic updates and rollbacks.
